DEEP THOUGHTS
by Jack Handey

If I ever get real rich, I hope I'm not real mean to poor people, like I am now.

1. Approximate Test 1 average score = 141 / 180 (79 %)   
   High = 180 / 180 (an OK score on this test!)

2. You can view your Test 1 scores at 3 p.m. today by clicking on the Grades link at course website and then clicking on your recitation section. Look for the row with your Phys23 PIN. You’ll find your score in the column labeled Test 1. (If there are no scores in that column, then the update was delayed until another day.) Tests will be returned in recitation section on Friday.

3. REGRADE PROCEDURES
Some of you may believe a grader had missed something or misunderstood something that you had actually written on your Test, and would like it regraded. Here is the procedure:
   a. Carefully think through the solution you actually wrote down on the test, not what you would like to have said or meant.
   b. If you determine something you wrote down was truly missed or misunderstood, compose a detailed statement describing the oversight on a separate sheet of paper. (Don’t even bother with "What I meant was ....") Do not write on the Test itself!
   c. Do not make any mistakes in your argument. If there is any mistake in physics or mathematics, then your statement will no longer be read and NO CHANGE will occur in your score.
   d. Attach this sheet to the front of your test and give it to your recitation instructor by the second section meeting after the Test is returned. The instructor will put it to the re-grade bin where the instructional team will consider your written statement.
