

Physics 2135: Asynchronous online lecture section 1CC

Lecture section 1CC is an online section. This means the lectures are delivered on the course website in the form of videos. We are offering the lectures in an **asynchronous** way. Lectures will be available at the latest by 9pm the evening before the scheduled class day, and will remain available throughout the semester. The online lectures present the same material as the live lectures.

You need to watch the lectures on or before the scheduled class day, i.e. each Monday and Wednesday, because the homework about that material is due on the following day in recitation, but you can choose any time that is convenient for you. Treat your asynchronous lectures just like any other class that you attend in person on a regular schedule. Since you should watch the lectures before you begin your homework, we suggest that you try to schedule some time earlier in the day so that you can take full advantage of the Physics Learning Center. Before the first class meeting, you should

- log into Canvas and familiarize yourself with the course material,
- watch the Introduction Video,
- read the Course Handbook and
- read the Syllabus.

You should check your email regularly. Last minute announcements and corrections which don't appear in the videos will be emailed to students in the asynchronous lecture section.
