

## Sources of Magnetic Field

Currents produce magnetic fields.

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2} \quad \longrightarrow \quad d\vec{B} = \frac{\mu_0 I}{4\pi} \frac{d\vec{s} \times \hat{r}}{r^2}$$

---

---

---

---

---

---

---

---

Example: calculate the magnetic field at point  $P$  due to a thin straight wire of length  $L$  carrying a current  $I$ . ( $P$  is on the perpendicular bisector of the wire at distance  $a$ .)

---

---

---

---

---

---

---

---

Example: calculate the magnetic field at point  $P$  due to a thin straight wire of length  $L$  carrying a current  $I$ . ( $P$  is on the perpendicular bisector of the wire at distance  $a$ .)

$$\vec{B} = \frac{\mu_0 I L}{4\pi a \sqrt{\frac{L^2}{4} + a^2}} \hat{k} = \frac{\mu_0 I}{2\pi a \sqrt{1 + \frac{4a^2}{L^2}}} \hat{k}$$

---

---

---

---

---

---

Example: calculate the magnetic field at point  $P$  due to a thin straight wire of length  $L$  carrying a current  $I$ . ( $P$  is on the perpendicular bisector of the wire at distance  $a$ .)

$$\vec{B} = \frac{\mu_0 I L}{4\pi a \sqrt{\frac{L^2}{4} + a^2}} \hat{k} = \frac{\mu_0 I}{2\pi a \sqrt{1 + \frac{4a^2}{L^2}}} \hat{k}$$

For infinite wire:

$$\vec{B} = \frac{\mu_0 I}{2\pi a} \hat{k}$$

Good approximation for field near long wire far from ends.

---

---

---

---

---

---

---

---

Magnetic Field Due to Long Straight Wire

$$B = \frac{\mu_0 I}{2\pi r}$$

Field loops around wire in direction indicated by right hand rule.

---

---

---

---

---

---

---

---

Magnetic Field Due to Long Straight Wire

- Field has constant magnitude along circles centered on wire.
- Field decreases with increased distance from wire.
- Field direction is tangent to circles centered on wire.

---

---

---

---

---

---

---

---

Example: A circuit consists of two wire arcs and two straight wires, as illustrated. The wires carry a current  $I_0$ . Determine the magnetic field at point  $P$ , at the center of curvature, due to the current. The radius of the small arc is  $a$  and the radius of the large arc is very large.
